Business Canvas Project — Assignment 2.2

Unit 2 Task 2 (persuasion half): Develop a Sales Tactic Drawing on Principles of Persuasion · AP Topic 2.2

Due: _____
Team size: Same team as Assignments 1A, 1.3, 1.4-1.5, 1C, and 2.1 (up to 3)
Submission: Your Business Canvas **Customer** section, **extended** — one sales tactic to win the first sale and one to bring the buyer back, each named to a Cialdini principle, written out in the exact words the customer will hear, face-tested, and tied to the CAC/LTV numbers you computed in Assignment 2.1 Section 3

Assignment 2.1 answered **who buys, and how do we keep them.** This assignment answers the smaller, sharper question: **in the sixty seconds at the stall, why does a person say yes?**

Theo's opening scene is the whole lesson. A father asks if anyone else is coming this afternoon. Theo could say *three other buyers* — real scarcity language, fake scarcity fact — and the man would probably have bought. He says no instead. The father buys the bike anyway, on the honest version. **Today you design the tactic that survives being said out loud.**

The CED treats Unit 2 Task 2 as **one deliverable spanning two topics**: *Customer – Plan to build customer relationships, **including sales tactic(s)***. 2.1 covered the relationships half (tactics, CAC, LTV). **2.2 adds the persuasion half.** Do not start a new plan — open Assignment 2.1's Section 3 and extend it.

Review first: [[2.2 Consumer Behavior - Vocab]] · [[2.2 Consumer Behavior - Slides]] · [[2.2 Consumer Behavior - Summary]] · [[2.2 Keep - Case Handout]] · [[2.2 Tea Yan Yue Se - Case Handout]] · [[2.1 Marketing to Customers - Vocab]]

Deliverables

Canvas Section	What You Submit	AP Topic	CED Task
Customer	**Sales tactic(s)** — 1 acquisition tactic + 1 retention tactic, each named to a principle, with exact wording and face-test verdict	2.2	Unit 2 Task 2 (persuasion half)
Customer	The tactic's predicted effect on your **CAC** and **LTV** — carried forward from Assignment 2.1 Section 3, not re-invented	2.1 → 2.2	Unit 2 Task 2 (continuity)
Customer	Which of the **four influence families** your target profile actually lives in, and what that changes about the wording	2.2.A	Support for LO 2.2.A
Market	Your customer's **purchasing pattern** (timing + frequency + quantity), plus one **law** and one **technology** that bend it	2.2.B	Support for LO 2.2.B

Canvas Section	What You Submit	AP Topic	CED Task
—	**Manipulation audit** — the honest twin and the manipulative twin of all seven principles, applied to your own business	2.2.C	Personal Finance: Spending 12-2 · 12-3 · 12-4 · 12-5 · 12-8

> **This deliverable is *not* asterisked in the CED.** Like the relationship plan in 2.1, it needs **reasoning, mechanism-naming, and numbers** — not a market test. The asterisked research arrives next assignment (2.3, Unit 2 Tasks 3–4). Section 4's mini-test is optional practice *for* that, not a substitute for it.

Where This Fits — Project Progress

#	Checkpoint	Topics	Assignment	Status
1	Customer problem + competitors + competitive advantage plan	1.1, 1.2	Assignment 1A	✅ Done
2	PESTEL analysis + market verdict	1.3	Assignment 1.3	✅ Done
3	Validation interviews + product idea + hypothesis test + vision & mission	1.4, 1.5	Assignment 1.4-1.5	✅ Done
4	Production process + supply chain plan	1.8	Assignment 1C	✅ Done
5	Commit to the idea + revised market analysis + integrated canvas	1.1–1.8	Unit 1 Final Canvas	✅ Done
6	Target customer profile + plan to build customer relationships	2.1	Assignment 2.1	✅ Done
7	**Sales tactic drawing on principles of persuasion**	**2.2**	**This assignment**	🔵 Current
8	Primary + secondary research, competitive landscape, data visualization	2.3	Assignment 2.3	⬜ Next
9	MVP, value proposition, branding	2.4	Assignment 2.4	⬜
10	Pricing strategy	2.5		⬜
11	Marketing channel(s)	2.6		⬜
12	Marketing campaign + digital marketing tools	2.7		⬜

Suggested pacing (≈4 class periods, matching the CED's 4 periods for Topic 2.2):

Milestone	By	You bring to class
M1 — Buyer read	Day 1	Sections 1–2 complete: your profile's influence family, your product's tiebreaker position, your pattern in three dimensions
M2 — Tactics drafted	Day 2	Section 3, Steps 1–2: two tactics, each named to a principle, each written in the exact words the customer hears
M3 — Tactics tested	Day 3	Section 3, Steps 3–4 face-tested aloud + Section 4 audit complete; peer runs the "*who?*" / "*certificate number?*" / "*how many?*" challenge on you
M4 — Submit	Day 4	Section 5 exam drill done; full worksheet submitted with your Assignment 2.1 Section 3 attached

> **Do not skip M3's peer challenge.** A tactic that only survives *your* reading of it is not face-tested. Have a teammate try to break it, and write down what broke.

Before You Start: The Framework

Seven rules from the 2.2 lesson that this worksheet runs on:

1. **Needs and wants start the decision; four tiebreakers end it** (EK 2.2.A.1). Consumers buy to meet basic needs and wants. When **rival goods** meet the same need, the choice is decided by **price · differentiated product features · availability · advertising.** Your tactic has to sit on one of those four — or on a fifth thing you can name.
2. **Match the depth of the process to the size of the decision** (EK 2.2.A.2). Consequential purchases (a home, a bike for your kid) run a **rational** step-by-step evaluation; small ones (coffee on the way to work) run **habitual**. Rational searching has a **cost — time spent gathering information** — and that cost is why the cheaper rival often loses anyway.
3. **Four families of influence, and the families are not interchangeable** (EK 2.2.A.3–A.6).
   Personal = who they are (age, sex, education, income, budget, occupation, lifestyle).
   Psychological = what they think and feel (values, beliefs, perceptions, learning, motivations).
   Social & cultural = what their groups expect (peers, family, social status, cultural norms, media).
   Situational = what's happening right now (store design — noise, lighting, organization — timing, product availability).

   > **The situational tell:** *if it changes when the shopper walks out the door, it's situational; if it travels home with the product, it isn't.* Warm lighting in the candle shop = situational. Soy wax = a product feature.

4. **A purchasing pattern is read in three dimensions** (EK 2.2.B.1): **timing** (when), **frequency** (how often), **quantity** (how much per purchase). Where a person lives and works, their income level, and the patterns of family and friends set all three.

5. **Laws and technology bend the pattern from outside** (EK 2.2.B.2, 2.2.B.3). Laws regulate **what, when, and where** people can buy; **consumer protection laws** exist to keep buyers away from fraudulent or unsafe products; when a product gets harder to obtain, the **need persists and substitutes arrive** (straw ban → paper and metal; motorcycle bans → e-bikes; the recall check is point 1 on Theo's inspection list). Technology makes new products accessible and changes **both sides of the sale** — seller reach *and* buyer information.
6. **Seven principles; sort by mechanism, never by keyword** (EK 2.2.C.1–C.8):

Principle	Mechanism	The sorting question
Scarcity (C.2)	perceived rarity	Is it presented as **limited or one-of-a-kind**?
Authority (C.3)	expert credentials	Does an **expert or credential** endorse it?
Consensus (C.4)	many buyers' behavior	Do **many others** already buy or approve?
Liking (C.5)	rapport / relatability	Does the seller feel **friendly, like me**?
Reciprocity (C.6)	obligation from receiving	Did the buyer **get something free** first?
Consistency (C.7)	self-image match	Does it appeal to **who the buyer believes they are**?
Unity (C.8)	group membership	Does the buyer feel **part of a group**?

> **The word in the answer choice is unreliable. The engine decides.** "Experts recommend it" is authority even if the sentence also says "everyone agrees."

1. **Every principle has an honest use and a manipulative misuse.** The CED asks you to **evaluate** tactics, not just list them — so the lesson gives you one test:

> **The face test:** say the tactic to the customer's face. **If the principle needs secrecy to function, it's manipulation. If it works in the open, it's persuasion.**

Tactic	Face test
"This tag lists everything I checked"	**survives** — the buyer can read every point
"Come back within 30 days and the tune-up is free"	**survives** — it reverses the risk keeping used-bike buyers from saying yes
"Three other people are coming this afternoon"	**dies** the moment a buyer asks "*who?*"

> **Strong-answer method (all through this worksheet):**
> **Name the mechanism → cite the EK → tie it to YOUR business and YOUR customer's exact words.**

Model at scale — 茶颜悦色: 500+ stores, and for **7 years the product was available in one city only.** Tourists planned trips around a cup. Scarcity (real: this flavor ends this season), consensus (1M+ genuine 小红书 posts), reciprocity (buy-6-get-1 stamp card, free festival gifts), consistency ("I'm a 茶颜 fan" decides the next order). **Every one of those tactics survives full disclosure.** That is why the brand scaled instead of collapsing — the honest version outsold the lie, and that is not luck, it is the psychology working as designed.

SECTION 1: WHICH INFLUENCE FAMILY IS YOUR BUYER ACTUALLY IN?

AP Topic 2.2 · LO 2.2.A · EK 2.2.A.1, 2.2.A.2, 2.2.A.3, 2.2.A.4, 2.2.A.5, 2.2.A.6

You already built the profile in Assignment 2.1 Section 2. Now find out **what is actually driving that person's decision** — because a tactic aimed at the wrong family is a tactic aimed at nobody.

1A. Re-state the profile you are persuading

> **My target customer profile (from Assignment 2.1):** _____
>
> **Their job to be done (what they are trying to get):** _____
>
> **Their budget number:** _____

1B. Which family is doing the work?

Mark each factor you collected in 2.1 as the **primary** driver of this purchase, then name the family (EK 2.2.A.3–A.6).

Factor about your buyer	Personal / Psychological / Social-cultural / Situational	Primary or secondary driver?	What it means for your wording

> **Sorting discipline:** "*they are parents of middle schoolers*" = **personal**. "*they care about safety*" = **psychological**. "*their other moms all bought one*" = **social-cultural**. "*the rack was at eye level and they only had ten minutes*" = **situational**.

The trap that costs the most points: putting a **product feature** in the situational row. Theo's warm string lights over the rack = situational. Theo's 21-point inspection = a feature. Test it: does it change when the shopper walks out?

1C. The four tiebreakers — where do you actually win?

Consumers buy to meet needs and wants. When rivals meet the same need, one of these four breaks the tie (EK 2.2.A.1). Compare against your **two** real rivals (Assignment 1A / 2.3 will name them):

Tiebreaker	Rival 1	Rival 2	You	Do you win, lose, or tie?
Price				
Differentiated features				
Availability				
Advertising				

> **Model answer from the lesson — Theo vs. both rivals at once:** loses nothing on **features** (21 checks + a signed tag nobody else offers), wins on **price** against the bike shop (half of retail), wins on **availability-of-proof** against the driveway seller. **Losing on price is fine — if you win on a tiebreaker the buyer ranks higher.**

> **Your tactic must attach to a tiebreaker you win, or to a fifth factor you can defend.** A persuasion tactic stacked on top of a losing position just gets you refused faster.

Where else does advertising tilt it? Think about 可口可乐 vs 百事可乐 in the 2.3 case: blind taste said Pepsi, brand said Coke — that gap was **advertising + attachment**, and it is exactly what Coke's research failed to measure.

1D. Rational or habitual — which is your customer's decision?

Your purchase	Consequential (money, commitment, risk) or small?	Rational process or habitual?	Search cost your customer pays	Do they pay it?

> **Model answer — Keep:** the **daily workout** is habitual (same time each day, streak counter, no comparison); the **premium subscription** is rational (compared against a ¥300–600/month gym and rival apps). **The app is engineered to make fitness habitual — the purchase is still rational.** Find the same split in your business: what part of using your product is routine, and what part of *buying* it is deliberated?

> **Model answer — the $100 trap:** a buyer who spends $75 on a bike plus $25 of their own search effort can still end up worse than the $95 certified one. **The search cost is real money.** If your product saves the customer that search cost, **say so — that is a tactic, not a slogan.**

Self-check:

- ☐ I identified the **primary** influence family for my profile, and kept product features out of the situational row — EK 2.2.A.3–A.6
- ☐ I named all **four tiebreakers** and know which one I win — EK 2.2.A.1
- ☐ I split my customer's decision into **rational** and **habitual** parts, and costed the search — EK 2.2.A.2

SECTION 2: READ THE PATTERN (AND WHAT BENDS IT)

AP Topic 2.2 · LO 2.2.B · EK 2.2.B.1, 2.2.B.2, 2.2.B.3

A sales tactic aimed at the wrong **moment** fails no matter how good the psychology is. Read the routine first.

2A. Your customer's purchasing pattern (three dimensions)

Dimension	What it measures	Your customer's answer	Your model, from the lesson
Timing	when the purchase happens		Theo: clustered in **late August** (back to school)
Frequency	how often		Theo: every **few years per kid** (one bike per growth spurt)
Quantity	how much per purchase		Theo: **one bike at a time**

All three steady = a habitual pattern. Where a person lives and works, their income level, and the habits of family and friends help set it (EK 2.2.B.1).

Now the strategic question: if the pattern is *once every three years*, a tactic that only works on **repeat** buying is aimed at the wrong lever — you need **referral** (the sibling, the classmate's parent) instead. Which of your two tactics in Section 3 is doing which job?

2B. One law that bends your pattern

Question	Your answer
Is any law, rule, or school/city policy changing **what, when, or where** your customers can buy?	
Is there a **consumer protection** issue in your category (recalled product, safety standard, age limit, false-claim rule)?	
If your product got restricted — what **substitute** would your need reappear in, and who would sell it?	

Model from the lesson: a helmet requirement pulls a helmet sale behind every kids' bike sale. A 禁摩 ban does not remove the commute — it moves it onto an e-bike, and a whole 改装 trade grows up to serve the gap. **The law changes availability. The need stays the same.**

CAUTION — for your own business, check this before you design a tactic: a tactic that pushes a product your customer legally cannot buy — or that hides a recall — is not persuasion. It is fraud, and it is the reason consumer protection laws exist (EK 2.2.B.2).

2C. One technology that rewrote your pattern (both sides)

Side of the sale	What the technology changed	Your business
Seller reach	who you can contact, and at what cost	
Buyer information	what the customer knows while deciding	

> **Model answer — Trued Cycles only exists inside this shift:** a marketplace app reaches buyers he would never meet at a flea market; free repair videos taught him the trade with no school; a parent **price-checks his tag against a new bike on her phone while standing at his stall**; messaging apps send the 30-day tune-up reminder with one tap.
>
> **The one that hurts is the second row.** If your buyer can compare prices at the counter, your tactic must survive a comparison **in front of you.** Design for that, not against it.

Self-check:

- ☐ I described my pattern in all **three** dimensions and found which are steady — EK 2.2.B.1
- ☐ I identified one law/policy affecting my category **and** the substitute it would create — EK 2.2.B.2
- ☐ I named one technology on the **seller** side and one on the **buyer** side — EK 2.2.B.3

SECTION 3: TASK 2 — DESIGN THE SALES TACTIC

AP Topic 2.2 · LO 2.2.C · EK 2.2.C.1–C.8 · CED Unit 2 Task 2 (persuasion half)

This is the graded deliverable. The CED's wording is **"develop a sales tactic"** — singular, concrete, in the customer's language.

Step 1 — Choose two principles: one to win the sale, one to bring them back

Purpose	Principle	Why this principle for this buyer (name the mechanism, cite the EK)
Acquisition — gets the first yes		
Retention / referral — gets the second yes or a new name		

> **Model answer from the lesson — Theo's honest column:**

Principle	Theo's honest version	The manipulative version
Scarcity	every used bike really **is** one of one	the "*three other buyers*" line — **faked**
Authority	the **signed orange tag** — a credential you can hold	a paid "expert" who isn't one

Principle	Theo's honest version	The manipulative version
Consensus	real local kids' pickup photos, **with permission**	fake reviews
Liking	a local teen explaining brake pads plainly	manufactured rapport
Reciprocity	free air + chain lube for **any** bike ridden in	a "gift" with hidden strings
Consistency	a listing opening "*for parents who put safety first*"	a small commitment, then exploited
Unity	tape color picks; a **Trued Families** ride	manufactured in-group pressure

Step 2 — Write the tactic in the customer's language

Not the concept. The **sentence, object, or offer** a real person will encounter. Be specific enough that someone else could run it.

Element	Acquisition tactic	Retention tactic
What the customer sees/hears (exact words)		
Where they encounter it (stall / listing / chat / receipt / package)		
What it costs you to run (¥ or time per customer)		
Which tiebreaker from 1C it attaches to		
Which pattern dimension from 2A it targets		

> **Sample answer from the lesson — the standard to match:**
> **Principle:** Reciprocity (EK 2.2.C.6) · **Tactic:** a pump and chain lube at the stall — any bike ridden in gets its tires aired and its chain lubed, **free, no purchase required.**
> **Face test, said aloud:** "*I'll air up your tires and lube your chain before you go — no charge, whether you buy or not.*"
> The visitor **still feels the obligation.** The principle works in the open. **The obligation is real, the value is real, and the disclosure changes nothing.**

Step 3 — Run the face test (say it out loud, to a person)

Say your exact words to a teammate playing your Section 1 profile. Have them ask the three questions that kill fake tactics.

Tactic	Say it aloud — your exact words	Their challenge	Does it survive?
Acquisition		"*Who?*" / "*How many?*" / "*Certificate number?*"	
Retention			

> **The rule (2.2.C principle + the lesson's ethics check):** if the tactic needs secrecy to function, it is **manipulation** and you must redesign it. If it works in the open, it is **persuasion** and you may keep it. **A tactic worth keeping survives full disclosure.**
>
> **Real-world proof of what happens when it doesn't:** a "非遗传承人" credential on a wellness patch — reportedly AI-generated — carried **over 100,000 sales.** The credential, not the patch, did the selling. Ask for the certificate number and the tactic dies **instantly** (and the seller with it).

Step 4 — Tie it back to your Assignment 2.1 numbers

The tactic is not a slogan; it is an investment. Use the CAC and LTV you computed in Assignment 2.1 Section 3.

Line	Assignment 2.1 value	With this tactic	Change	Why the tactic causes it (mechanism, not hope)
CAC = all acquisition costs ÷ customers acquired	$	$		
LTV (in margin: first + repeat + referred)	$	$		
LTV − CAC	$	$		
Cost of running the tactic	—	$		

> **Model reasoning:** free air + chain lube costs Theo about $0 in parts and 4 minutes per visitor. If **1 in 6** visitors converts and one converts to **two** sibling bikes over three years, the reciprocity tactic lowers CAC (walk-ins arrive free, referrals arrive free) and raises LTV (the tune-up visit is created). That is a mechanism, not a wish.

Step 5 (optional, feeds Assignment 2.3) — Test which of your two wordings wins

The Canvas Guide says students in this task "*develop hypotheses about which sales tactics... might attract their target customers.*" That is a one-evening job, and it becomes the raw material for Task 3's asterisked hypothesis next week.

> **My hypothesis (variable → measure → expected number):**
> "If we show **Version A** (_____) and **Version B** (_____) to **____ people who match my profile**, then **____%** will choose _____."
>
> **Success criterion, set BEFORE I ask anyone:** _____

Version shown	# shown it	# who said they'd act (not "sounds nice")	Which they picked	Why they picked it (their words)
A				
B				

> **Discipline carried over from Unit 1:** record **what they'd do**, not what they'd say is good. "Sounds great" is politeness, not data — "*praise the dish, then never come back.*" Ask "*what would you do next?*"
>
> **Sample-size honesty:** five people is a hint, not a finding. Say so in one sentence here — that single habit is what saves you from being New Coke (200,000 data points, still wrong).

Self-check:

- ☐ I chose **two** principles and named each **by mechanism**, citing the EK — EK 2.2.C.1
- ☐ My tactics are concrete objects/offers/sentences, and each attaches to a tiebreaker I win — EK 2.2.A.1
- ☐ I said both tactics aloud and the acquisition one **survives full disclosure** — 2.2.C evaluation
- ☐ My CAC/LTV change is explained by a mechanism, with the tactic's own cost included — EK 2.1.C.2, 2.1.C.3
- ☐ I did not use a tactic that hides a defect, fakes a credential, or invents demand — EK 2.2.B.2

SECTION 4: THE MANIPULATION AUDIT

AP Topic 2.2 · LO 2.2.C · EK 2.2.C.1–C.8 · Personal Finance: Spending 12-2, 12-3, 12-4, 12-5, 12-8

Run **all seven** principles against your own business, honest and manipulative, whether or not you use them. This is where the CED's "*evaluate sales tactics*" is earned.

Principle	Honest version I could run (must be true)	The manipulative version I refuse to run	Is the honest version actually true for me?
Scarcity			Y / N — if N, delete the tactic
Authority			Y / N
Consensus			Y / N
Liking			Y / N
Reciprocity			Y / N
Consistency			Y / N
Unity			Y / N

4A. The three checks that expose a manipulative tactic

Ask out loud	Kills	Example from the lesson
"Who?"	faked consensus, faked demand	the "*three other buyers*" line; the queue that may be hired

Ask out loud	Kills	Example from the lesson
"How many?" / "Of what?"	faked scarcity, survey bases	7/9 = 78% vs. 30 of 120 = 25%, not 15%
"Show me the certificate."	borrowed or false authority	the AI-generated 非遗传承人

4B. Your red line, written down

> **The tactics we will not use, even though competitors do: _____**
>
> **Which of our stated core values (Assignment 1.4-1.5) this protects: _____**
>
> **The one tactic on the list above we find most tempting, and what we will do instead: _____**

> **Decoration check, applied to persuasion.** In 1.4-1.5 you tested whether a core value was a decoration: a value abandoned the first time money appears was never a value. This section is that test with the money now actually on the table. **Unity is the principle most likely to cross the line** — community is persuasive precisely because it feels chosen; the same mechanic, run as manufactured in-group pressure, is the version that fails publicly (see the lululemon case: a "religious-grade" brand lives on *chosen* membership, and the moment it feels conscripted the goodwill flips).

Self-check:

- ☐ I ran all seven principles and marked whether the honest version is **true** for my business
- ☐ I can kill each manipulative twin with one of the three questions — "*who?*" / "*how many?*" / "*certificate number?*"
- ☐ I wrote a red line and tied it to a stated core value — not a slogan, a commitment

---

SECTION 5: EXAM DRILL — The Tells

Classify by **mechanism**, not by the word that appears. Then — the second half of the real skill — say how **your** business would use each one honestly.

#	Item	Classification	One-sentence reason (name the tell)
1	"Only 2 left in this frame size" (true: one of one)	scarcity / consensus / availability	
2	"9 of 10 parents here re-ordered the tune-up"		
3	A mechanic in a shop uniform signs the tag		
4	"For parents who put safety first"		

#	Item	Classification	One-sentence reason (name the tell)
5	Free tire-air no matter who you buy from		
6	A local teen, same school as the buyer, explains brake pads		
7	An invite-only weekend group ride for past buyers		
8	"Once you've bought one, you know the difference"		
9	The stall's warm lighting and a rack at eye level	personal / psychological / social-cultural / situational	
10	The buyer "values not being the parent whose bike fails"		
11	A 禁摩 law pushing commuters onto e-bikes	law → substitute / technology → both sides	
12	Shoppers comparing your price on their phone at your stall		
13	A customer buys the same coffee every morning without thinking	rational / habitual	
14	A family spends a weekend comparing three strollers		
15	"Cancel your membership: call between 2–4pm, Tuesdays"	which principle is being exploited?	
16	Fake five-star reviews from accounts that don't exist	honest / manipulative + which question kills it	

> **Item 8 and 15 are the same principle in two different costumes** — one honest, one not. Item 1 vs. 7 tests whether you can tell **scarcity** from **unity** when both say "you're special." The keyword won't save you; the mechanism will.

And the part the exam writes as free response:

> **a)** Name one sales tactic **you** designed. **b)** Which principle does it draw on, and what is the mechanism? **c)** Would the tactic still work if the customer knew exactly how it worked? **d)** How does it change your LTV or CAC?

Write that four-part answer here in one paragraph, before Section 5 is graded:

Self-check:

- ☐ I classified every item by **mechanism**, and can say why the keyword was a decoy
- ☐ I can sort **personal / psychological / social-cultural / situational** on sight, using the "*does it travel home with the product?*" test
- ☐ I can answer a **rational vs. habitual** question with the **search cost** included
- ☐ I can name the honest **and** manipulative version of any principle given on request

---

Grading Rubric

Section	Excellent (A)	Good (B)	Developing (C)	Needs Work (D/F)
1 — Influence family + tiebreakers (2.2.A)	Profile's primary family correctly identified with the situational/feature distinction clean; all four tiebreakers compared against two named rivals; rational/habitual split with search costed	Families sorted; tiebreakers listed with one rival; rational/habitual stated	Families confused or features filed as situational; tiebreakers asserted	Not addressed
2 — Purchasing pattern (2.2.B)	All three dimensions specific and steady-vs-broken identified; one law traced to the substitute it creates; one technology named on **both** sides, with the tactic's target row stated	Dimensions filled; law or technology named	Generic pattern; law/technology missing	Not addressed
3 — The sales tactic — Unit 2 Task 2 (2.2.C)	Two tactics (acquisition + retention), each named to a principle **by mechanism** with EK cited; written in the customer's exact words; costed; attached to a won tiebreaker; face-tested aloud against the three killer questions; LTV/CAC change explained mechanistically	One or two tactics, principle named, wording concrete, face test run	Tactics generic ("use social proof"); principle named by keyword; no numbers	No tactic or the tactic fails the face test and is kept anyway
4 — Manipulation audit (2.2.C + Spending)	All seven principles filled with honest **and** refused-manipulative versions; truth of each honest version marked; the three exposure questions applied; red line tied to a stated core value	Most principles covered; red line present	Audit incomplete; red line absent or slogan-shaped	Not addressed

Section	Excellent (A)	Good (B)	Developing (C)	Needs Work (D/F)
5 — Exam drill	All correct with mechanism-based reasoning; the 4-part free-response paragraph complete	Most correct	Several keyword-based errors	Mostly incorrect

Important Notes

1. **Extend Assignment 2.1 — do not replace it.** Unit 2 Task 2 is one deliverable across two topics: 2.1 wrote the **relationship plan** (tactics, CAC, LTV), 2.2 adds the **sales tactic** built on the principles of influence. Submit both sections together. If your Section 3 Step 4 numbers contradict your 2.1 numbers, that is a finding — write which one you are changing and why.
2. **This deliverable is not asterisked.** The CED requires hypothesis testing on *target customer profile* (2.1, done), *research findings on customer preferences* (2.3, next), *MVP* and *branding* (2.4), *pricing* (2.5), and *marketing campaign* (2.7). Your sales tactic needs **mechanism + reasoning + numbers**. Step 5 is optional practice for 2.3, not a requirement here.
3. **Next assignment turns this into formal research.** Assignment 2.3 = Unit 2 Tasks 3–4: a **primary-source test of a customer-preference hypothesis**, a **secondary-source read of the competitive landscape**, and an **Appendix data visualization**. Keep your Section 3 wording and any Step 5 tallies — they are already drafted hypotheses, and 2.3 is where you get to prove them.
4. **The honest column is the durable one.** 茶颜悦色 kept a single-city restriction for **seven years** and built a national brand on it; the fake 非遗 patch moved **100,000 units** and then got曝光 by state media. Persuasion compounds; manipulation is a loan against your reputation, and the repayment date is the first customer who asks "*who?*"
5. **Consumer protection is not a footer here.** EK 2.2.B.2 exists because tactics that hide a defect, fake a credential, or push a restricted product are illegal, not merely rude. If your category has a safety, recall, age, or labeling rule, name it in Section 2B **before** you design Section 3.
6. **Team size:** same team as every prior assignment. Every member must be able to name their tactic's **mechanism** unaided — the exam-day FRQ is written **individually**, and the multiple-choice version of this question will dress the same engine in different words on purpose.
7. **AP Exam connection:** LO 2.2.C is one of the few LOs in Unit 2 that asks you to **both** evaluate **and** produce ("Evaluate sales tactics that draw upon Cialdini's principles of influence, **and develop a sales tactic**"). Section 3 is the produce half, Section 4 is the evaluate half — and the *Business Canvas Project Exam-Day Validation FRQ* (15% of your score) is where you defend your own tactic under exactly this kind of questioning.
